

Emergency Restoration Training

Emergency restoration. Whether the fiber cable network is above or below ground, inside or outside a building, these words strike fear in any network or outside plant manager. Network outages can cost ten of thousands of dollars every hour your system is offline. When (not if) a problem occurs, it is critical not only to have a recovery program in place, but to have staff that is trained to deal with the emergency in timely, cost-efficient manner.

The Emergency Restoration advanced training course from The Light Brigade will help your organization to develop its own ongoing restoration program. It places heavy emphasis on fault location, troubleshooting, and test equipment, then culminates in a second day of hands-on drills that simulate actual field restorations for both retrievable and non-retrievable slack scenarios.

For a limited time, take advantage of special pricing on this amazing two-day course. Schedule this course to be held at your facility anywhere in the United States between now and July 31 and we'll train six people for only \$5000. **That's a \$3000 savings!** We'll even custom tailor the course to meet your application, equipment, or specific staff needs.
